Abstract

The purpose of this research is to find out types and the dominant one of transition signals used in narrative text. This research aimed to find out the use of transitional signals in narrative text specifically to find out the types of transitional signals and the accuracy of its use. The method of this research is descriptive qualitative by doing library research. The data were collected by analyzing the transition signal used in five narrative texts. The transitional signals that were analyzed are transitional signals for adding ideas and emphasizing, showing contrast and comparison, showing cause and effect, providing examples, introducing time order or sequence, and concluding or summarizing. The results shows that the transition signals used in narrative text are the transition signal indicates time, comparison, additional idea, and contrast. The dominant transition signal used the transition signal indicates additional idea. The findings shows that the transition signal used on the narrative text is developed in a single central theme.

Keywords: Transition Signals, Narrative Text

I INTRODUCTION

Transitional signals are connecting words or phrases that strengthen the internal cohesion and coherence in the text. They show the relationships between the parts of a sentence, between the sentences in a paragraph, or between the paragraphs in a longer piece of text. Not only that, transitional signals are connecting words and phrases that link sentences and paragraphs together so that there are no abrupt jumps or breaks between your ideas. They improve the connections and transitions between sentence and paragraphs in order to help a reader see the connection or relation between ideas. It other words, they give a logical organization and structure to a text.

Transition signal is defined as a bridge to link the ideas, it makes the idea hold together, the ideas that is going to convey cannot be accepted if there is no bridge which relates each idea to other, it shows that how important transition signal in building the ideas (Vincent: 1984). The absence of holding together ideas in paragraph is the reason why the writer chooses the title of this research. Transition signals are connecting words or phrases that act like bridges between parts of the writing, they link the sentences and paragraphs together smoothly so that there are no abrupt jumps or breaks between ideas. There are four basic groups of transition signals according to the connecting forms, sentence connector,
Transition signals are useful in achieving good cohesion and coherence in paragraph. This research gives information on what transition signals are, the grammar of transition signals, and different types of transition signals. There is also an example essay at the end in which you can highlight the different types of transition signal, as well as some exercises to help you practice this area.

Language is one of the of the human behavior aspect in life that involves the use of vocal sounds in meaningful patterns, and when they exist, corresponding written symbols to form, express, and communicate thoughts and feelings. Language is any system of signs, movements, etc., used to express meanings or feelings, particular style or manner of expression (Procter 1981:617).

There are some forms of language, it can be signs, symbols, gesture, use of vocal sound, and also in written form. Conveying language in written form also can be used indirectly, that is just writing down all thoughts or feelings in a piece of paper without getting face to face, so that many people think that this communication form is not so difficult. There are many aspects of transition signal that need to pay attention carefully. The first thing that you have to think is that you should write your idea so that your reader can understand what you mean, how do you arrange your writing related to each other so that it is hold together and form a unity idea.

By doing this analysis, it is proven that the transition signals hold the most important role in linking the ideas. In this research the researcher uses the narrative text as the object of analysis because narrative text is a very interesting reading material which often to be chosen by many people. The contents of narrative text are also more interested because usually they give certain experiences that can touch one’s feeling so that can be understood more easily.

In doing this research the researcher could not apart from the problems. There are some problems should be focused in this research. It can be formulated as follows: 1. What types of transition signals are used in narrative text? 2. What is the dominant type of transition signal found in narrative text?

This research focuses in analyzing the Transition Signals used in narrative text. The purposes of this research are: 1. To find out the types of transition signals used in narrative text. 2. To find out the dominant types of transition signal used in narrative.

**Transition signals**

In this session, the researcher will explain about transition signal, the grammar of transition signals, and different types of transition signals. Tampubolon (2014:3) elucidated that the wrong placement of the words in the sentences will make the sentence sound awkward, ridiculous or confusing. The researcher also need to watch the placement of modifiers such as almost, even, hardly, nearly, often, and only. There is also an example essay at the end in which you can highlight the different types of transition signal, as well as some exercises to help you practice this area. Oshima, A & Hogue, A 1991 elucidated that transition signals are connecting words or phrases that act like bridges between parts of the text. They link your sentences and paragraphs together smoothly so that there are no abrupt jumps or breaks between ideas. Transition signals act like signposts to indicate to the reader the order and flow of writing and ideas. They strengthen the internal cohesion of writing. Using transitions makes it easier for the reader to follow your ideas. They help carry over a thought from one sentence to another, from one paragraph to another, or from one idea to another.

When reading the narrative text, it is needed to make a list of ideas one after another to help the readers know how the ideas are related, we use certain words that connect one thought to the next. These words are called transition words since they create the transition, or bridge between sentences (Smoke 1987:173). According to Mandell (1985:114), transition signals are the words and phrases show the relationship of one sentence or clause to another. These signals speed up your reader’s understanding and tie together ideas before your reader have a chance to forget them. Besides that, Mandell (1989:81) states that transition signals are words and phrases; but, similarly, also, on the other hand, moreover, in contrast, the same as, therefore, however, and so on, aid coherence by indicating the relationship among sentences. By establishing these connections,
transition words and phrases tie together ideas in paragraph.

Moreover Vincent (1984:166). states that transition signal is a signal word indicates the presence of a premise or conclusion. Transition signals are words indicating exactly how a statement in one sentence relates to the statement it follows on the other hand Frank (1983:57) defines that the word transition, which means “go over” or “go across”, refers to the smooth connection between paragraphs. Transition acts as a bridge between the general content of the main part of the composition. Next, McMurrey (1983:178) states that transition signal is like glue. It glues pieces of the paragraph fit together into solid. Based on those definitions above the writer concludes that transition signal is the words and phrases which have a function as a bridge or glue for tying each sentence to be together, so that the ideas in paragraph to be related and unity.

There are several types of transition signals. Harbrace (1968: 97). Some lead your reader forward and imply the building of an idea or thought, while others make your reader compare ideas or draw conclusions from the preceding thoughts. Broadly speaking, transition signals can be divided into three types, they are: sentence connectors, clause connectors, other connectors. Oshima (1991) again defined that sentence connectors are used to connect two sentences together. They are joined by a full-stop (period) or semi-colon, and are followed by a comma. The following are examples of sentence connectors. Transition signals are very useful.

<table>
<thead>
<tr>
<th>Types of Transition Signals</th>

To contrast Sentence connectors

The Basic Group of Transition Signals
Oshima (1991) states that transition signals can be divided into four basic groups according to function, they are:
1. Sentence Connectors
   Sentence connectors join one independent clause (Subject + Verb + Complement) with another to form a compound sentence, which is punctuated with a semicolon (;) and a comma (,). The sentence connectors used are: however, therefore, furthermore, for example, on the other hand, in addition. The pattern is: Independent Clause ;
   Sentence Connector ,
   Independent Clause Examples: I dislike mushrooms; therefore, I never eat them. Mushrooms are good for you; however, I never eat them.
2. Coordinators
   Coordinators join two independent clauses to form a compound sentence. Punctuate the sentence with a comma after the first clause. The coordinators used are: and, but, yet, or, nor, for, so. The pattern is: Independent Clause , Coordinator Independent Clause
   Examples: Mushrooms are good for you, but I dislike them. I dislike mushrooms, so I never eat them.
3. Subordinators
   Subordinators introduce a dependent clause (subordinator + subject + verb + complement) that joined to an independent clause to form a complex sentence. The subordinators used are: because, after, since, as, although, if, when. There are two positions for the dependent clause:
   If the dependent clause comes before the independent clause, use a comma after it. The pattern is: Dependent Clause ,
   Independent Clause Examples: Although mushrooms are good for you, I dislike them. Because I dislike mushrooms, I never eat them. If the dependent clause comes after the independent clause, do not use a comma. The pattern is: Independent Clause Dependent Clause
   Examples: I dislike mushrooms although they are good for you. I never eat mushrooms because I dislike them.
4. Prepositions and Determiners
   This group of transition signals has no special rules for punctuation. The prepositions used are: because of, due to, in spite of. The determiners used are: another, additional, final. Examples: I dislike mushrooms because of a bad experience I once had. Another reason I dislike mushrooms is their rubbery consistency.

Kinds of Transition signals
There are some kinds of transition signals base on its meaning or function, such as: transition signal to introduce an additional idea, transition signal to introduce an opposite idea, transition signal to introduce an example, transition signal to introduce a conclusion or summary, transition signal to show the signal time, etc. In this study the writer only focuses in some of transition signals for general use, they are:

Oshima (1991)
1. The transition signals to indicate the signal time
   1. Immediately
   2. Thereafter
   3. Formerly
   4. Finally
   5. Meanwhile
   6. Previously
   7. Then
   8. Soon
   9. Until
   10. Afterward
   11. At first, second, etc.

1. The transition signals to contrast.
   They are:
   1. In contrast
   2. However
3. Nevertheless
4. In spite of
5. Instead
6. On the other hand
7. Despite
8. On the contrary
9. Differing from

2. The transition signals to indicate an additional idea they are:
   1. Also
   2. And
   3. As well
   4. In addition
   5. Moreover
   6. Besides
   7. Furthermore

3. The transition signals to compare signals used are:
   1. But
   2. Yet
   3. Still
   4. Similar to
   5. Like
   6. Whereas

The Short Stories

Cliff (2018) Explained that A short story is fictional work of prose that is shorter in length than a novel. Edgar Allan Poe, in his essay "The Philosophy of Composition," said that a short story should be read in one sitting, anywhere from a half hour to two hours. In contemporary fiction, a short story can range from 1,000 to 20,000 words. Short stories also lend themselves more to experimentation — that is, using uncommon prose styles or literary devices to tell the story. Such uncommon styles or devices might get tedious, and downright annoying, in a novel, but they may work well in a short story. Another opinion,

Christine Reynier (2018) claimed that short story is defined as an art of proportion and perfection. Again, Lin Yutang (2018) discussed that “The purpose of a short story is that the reader shall come away with the satisfactory feeling that a particular insight into human character has been gained, or that his (or her) knowledge of life has been deepened, or that pity, love or sympathy for a human being is awakened.

Short stories as kind of writing of course very close in using transition signals, so that the ideas of writing can be conveyed clearly because of the ideas is tied together. From the using of transition signals dominantly, it also can help the rider to analyze the stories tell about. Short story is a kind of story shorter than the novel, characteristically developing a single central theme and limited in scope and number of characters. A short story is an invented prose narrative shorter than a novel usually dealing with a few characters and aiming at unity of effect and often concentrating on the creation of mood rather than plot. Besides, short story is a work of fiction that is usually written in prose, often in narrative format. This format tends to be more longer works of fiction, such as novels or books.

The Elements of Short story

Short stories tend to be less complex than novels. Usually a short story focuses on one incident, has a single plot, a single setting, a small number of characters, and covers a short period of time. When short stories intend to convey a specific ethical or moral perspective, they fall into a more specific sub-category called Parables or (Fables). This specific kind of short story has been used by spiritual and religious leaders worldwide to inspire, enlighten, and educate their followers. This source was taken from the internet. There are three main elements of short stories, they are: character, plot, and setting (Oshima, 1991).

Character: A character is a person, or sometimes even an animal, who takes part in the action of a short story or other literary work. This character can be divided into some parts, some commonly are:

2. Protagonist: The driver of the action of the story and therefore responsible for achieving the story's Objective Story Goal (the surface journey). In western storytelling tradition the Protagonist is usually the Main Character.
   1. Antagonist: The character that stands in opposition to the protagonist.
   2. Supporting character: A character that plays a part in the plot, but is not major
   4. Plot: or storyline is often listed as one of the fundamental elements of fiction. It is the rendering and ordering of the events and
actions of a story. Plot also can be divided into two kinds, they are:

5. Chronological Order: All of the events occur in the order in which they happened in writing. There may be references to events from the past or future, however the events are written in time order. There will not be flashbacks/flash forwards.

6. Flashback: also called an ellipsis is an aninterjected scene that takes the narrative back in time from the current point the story has reached. Flashbacks are often used to recount events that happened prior to the story's primary sequence of events or to fill in crucial back story.

7. Setting: is the time and place in which it happens. Authors often used descriptions of landscape, scenery, buildings, seasons or weather to provide a strong sense of setting.

II RESEARCH METHODS

The research method in this study was Descriptive qualitative. Five selected narrative text were analyzed in every sentence of those text to find what transition signals used. In order to get more information, library research was conducted to support the theories about transition signals.

There were five narrative text were analyzed as assumed as the object of this research. There are only five titles of those narrative text were analyzed as the titles, namely:

1. Tortoises
2. The Flat in Nakshabandi Street
3. After death, the Judgment
4. A citizen’s Fate
5. The Exorcist of the Blue Mountains

In the Technique of collecting data, the data were collected by observing the five narrative text, then, identifying the transition signals used on each text.

In techniques of Analyzing Data, the data were analyzed by classifying the types of transition signals used in each narrative text. After classifying the transition signal found in the narrative text, it was done the identification of types of each transition signals. Next, the dominant types of transition signal was identified. Finally, the findings were interpreted.

III RESULTS AND DISCUSSION

The findings and discussion in this research is the explanation of the research results of research based on the data which had been taken from library research about transition signals. In analyzing the data it is analyzed all the sentences consisting transition signals, it is also underlined the sentences of narrative text which use transition signals, they are enclosed in appendices.

Kinds of Transition Signals Used in Narrative text

The analyzing result of transition signals used dominantly in short stories above can be seen by the following table:

<table>
<thead>
<tr>
<th>No.</th>
<th>Title of Story</th>
<th>Signal Time</th>

</table>
Indeed, in this research it is found that the transition signal indicates time was dominantly found in narrative text. It deals with the plot in a story. Plot or storyline is one of fundamental element of fiction. It is the rendering and ordering of the events of a text. Transition signal indicates time puts every event in chronological order, so that by understanding the time transition, the readers will know the arrangement of event or action happened previously.

**IV CONCLUSION**

Having analyzed the data on the previous chapter, the researcher comes to the following conclusions:

1. There are four kinds of transition signals used in the selected narrative text, they are: transition signal indicting the time, indicating an additional idea, showing the comparison, and showing contrast.
2. There are different dominant transition signals used in each title of narrative text. By counting all the results, the researcher found that the dominant transition signal used in narrative text is the transition signal indicating the time.

**Suggestions**

1. The readers should study about transition signals in order to help them to use the transition signals correctly because the using of transition signals is important in writing in clarifying the ideas of reading.
   The readers should read the text carefully so that it can be known what the text tell about related to the using of transition signals in developing the idea.
